AKASH SAMPATH

PROFILE

I am Akash Sampath, freelance websites builder and a tech enthusiast, currently working as an Ad Operations Analyst at Comcast. I prioritise simplicity at-most priority all while retaining purpose. Applies both to the code I write and designs I make.

EXPERIENCE

PHOTOGRAPHER, SRI RAGHAVENDRA VIDEOGRAPHICS, CHENNAI — 2017 - 2022

My interest in filmmaking, artistic still images and colour science led me to this job where I satisfied the customers with remarkably great photos with colours which make them look like ripped out of a movie.

AD OPERATIONS ANALYST, COMCAST - EFFECTV, CHENNAI — JAN 6TH 2023 - PRESENT

Been and still Delivering the best advertising solutions to the customers with 100% quality during my time, Team management, Data analysis and management, Innovating and automating the process with the tech I build like python scripting most of the work. Built a social website where our teammates are notified about the fellow teammates birthdays prior and also an all in one place to get links of every tool within their browser, with an aesthetically pleasing design. Last two weren't necessary for my organisation and are my very own things which I contributed them.

FREELANCE WEBSITE BUILDER, FOR SMALL BUSINESSES AND PORTFOLIOS — 2024

After I found my interest in building designs, I wasted no time and immediately took over client orders to fine-tune my learning via projects, later turned it to a freelance business. Starting with an online meeting with the clients and ask their needs and then get to work on it. I charge a very lower price when compared to the competitors, all while following a minimalistic design language and subtle animations with carefully chosen colour palettes and font styles. All websites are hard-coded with HTML, CSS & JavaScript. No-code builder tools are not used.

EDUCATION

Vel Tech Ranga Sanku Arts College, Avadi - Bachelor of Computer Sciences, 2020 - 2023
University of Madras, Chennai - Master of Information Technologies, 2023 - Present

SKILLS

Languages & Extras - C, C++, Java, Python (Automation scripting, Basic AL/ML building), Swift & Swift UI (For iOS and iPadOS Apps development), Git, GitHub, HTML, CSS and JavaScript. (Kindly check my GitHub for some of these projects)

Language adaptability - I can learn newer programming languages easily and adapt to them so fast.

Work with purpose - My vision towards minimalism and design with purpose of course would reflect in the work I do in your organisation.

Problem Handling - It is so true that everyone might stumble on their way at some point. So, I believe that getting over that is also most important. I am so efficient in finding info and answers from documentations and the whole internet. Which enables me to get things done quick.

CERTIFICATIONS

Certified for mastering C, C++, Python & Java until Data Structures and Algorithms. Rest of the languages I mentioned above are self taught with personal interest.
